Save 'John & Michael' for Lincolnshire. Steam ploughing and Lincolnshire have been closely connected since 1850 when Lord Willoughby d'Erby developed, on his Grimsthorpe estates, one of the first successful methods of harnessing steam power to cultivation. Lord Willoughby's steam ploughing tackle was exhibited at the Great Exhibition in 1851 and was seen by John Fowler. Shortly afterwards Fowler developed his own steam ploughing system which became, from 1860 onwards, the most successful system used in the country. Steam ploughing was readily adopted by Lincolnshire farmers whose large relatively flat fields were ideally suited to this form of cultivation. Surprisingly, none of the Lincolnshire steam engineers developed ploughing tackle and Fowler's system was used almost exclusively. The county at one time had approximately 20% of all the ploughing engines in use in England. It was also the home of the country's largest steam ploughing contractors — Ward & Dale of Sleaford — who in 1910 owned 24 complete sets of ploughing tackle.

In view of its importance to the history of agriculture in Lincolnshire a set of steam ploughing tackle has been high on the 'shopping list' of the County Museum Service, who for some years have been building up a significant collection of machinery, tools and records illustrating the development of agriculture in the area. A complete set of tackle has now been found including the two steam engines, balance plough, the living van and water cart. All are in original condition and, with minor restoration, ready for the road. This set is unique for its completeness and for its Lincolnshire connections. There will never be another chance to acquire such a good and appropriate set for the County.

The engines were bought from Fowlers of Leeds in 1925 by Mr H Carter of Tydd Manor, Nr Holtbeach, and were named 'John' and 'Michael' after his two sons. They were used to on Mr Carter's farms in the Fens until 1945.

They were then purchased by the present owner, Mr H Thorby of Evedon, Nr Sleaford. Mr Thorby was one of the last people in the county to use steam tackle and this particular set remained in use until 1965.

Mr Thorby has now decided to sell the tackle and has had offers from all over the country. He has agreed to give the County Museum Service the chance to raise the money to keep this important part of Lincolnshire's history in the county. The money must be found by 31st January 1978.

The Friends of Lincoln Libraries, Museum and Art Gallery have, therefore, launched an appeal to raise £5,000 towards the total purchase price of £14,000.

Further details may be obtained from Mrs C M Wilson, Museum of Lincolnshire Life, Burton Road, Lincoln. Telephone Lincoln 28448.

Donations should be sent to: Mr J J B Wright National Westminster Bank, 97 High Street, Lincoln.
The reconstituted AIA requires that members complete the new form of application for membership of the AIA Limited, which was distributed to all members with Bulletin 4.5. Failure to do this will mean that they are not entitled to receive any further material from the Association. As was explained in the President’s letter, the old AIA has now ceased to operate and constitution of the new limited company requires all members to sign the new form of declaration. If you have not yet done so please complete this form and return it to the Assistant Secretary as soon as possible; his address is

The British Waterways Board 1978 Calendar is now available. This year the 12 full colour plates feature the distinctive style of artist Ronald Maddox.

The scenes range from the architectural — the Avoncliff Aqueduct in Wiltshire on the Kennet and Avon Canal, and the scenic — the Caledonian Canal in Scotland, to the purely functional — the Board’s push-tow barge system on the Aire and Calder Navigation in Yorkshire.

Priced at £1.70 ($4.00 postage and packing) the calendar is available from the Canal Shop and Information Centre, British Waterways Board, Melbury House, Melbury Terrace, London NW1 6JX.

A Railway Environment Panel is being set up by British Rail to advise them on policies and principles to be followed when dealing with Environmental matters, and to encourage and promote their practical application.

At a seminar on Industry and the Environment at the Royal Society of Arts earlier this year, British Rail Chairman, Peter Parker, stated “it is no longer enough to press the claims of the Environment as a self-contained interest. Its consideration now seems to be sufficiently accepted to require integration within the general policies and practices of Industry”.

British Rail is conscious of its opportunities to make a positive contribution towards improving the national environment, and also of its responsibilities both to conserve what is good and to prevent further deterioration of that part of the national railway heritage considered worthy of preservation. This responsibility applies not only to such important elements as buildings, structures, trains and ships, but also to the countryside itself where 11,000 route miles of the railway system provides a unique ecological habitat. As a first step a post of Director-Environment was created in June.

The new panel has been drawn from a wide spectrum, and has been able to call on the experience and skill of several distinguished “outside” members to enhance its effectiveness.

A New Museum of Industrial Archaeology: One of the latest additions to the fast growing tally of IA museums is the Black Country Museum located on a key site adjoining the A4123 Wolverhampton-Birmingham New Road under the shadow of Dudley Castle at the mouth of the Dudley Canal Tunnel. It covers a 26 acre site and is fast achieving its ambition to recreate a Victorian industrial hamlet complete with canal boat yard, ironworks, chain shop, soapworks, chapel, bakery, chemists and a pub incorporating a domestic scale brewery. Exhibits include an elaborate iron road bridge, originally built on the skew over a Wolverhampton canal in 1879. The site already incorporates an ambitious complex of nineteenth century limekilns which obtained their raw material from nearby Wren’s Nest, the underground quarries being honeycombed with arms of the canal tunnel. (It is worth mentioning that Wren’s Nest was the birth place of Abraham Darby, founder of the celebrated Coalbrookdale Company, whose parents were first generation Quakers in Dudley).

Already the site, officially opened this October with a rally of scores of boats of every kind, including the museum’s own ice breaker “North Star” dating back to 1868, has an air of bustle about it with re-erected buildings saved from destruction, surrounded by pavements of Staffordshire blue bricks. The boat yard, for example is completely equipped as a working exhibit with blacksmith’s forge, nail store, rivet store, paint store, saw mill, stable, steaming room and tar boiler. It will be capable of maintenance work on any traditional narrow boat.

The chief prestige exhibit will be a reproduction of the world’s first steam engine, built by Thomas Newcomen in 1712 within half a mile of the museum. This will give an insight into the advanced technology of this influential giant step into the modern world and the tremendous scale on which this pioneer steam pumping engine was constructed. The faith in so revolutionary an invention plus the massive capital investment must have been tremendous. It is hoped to inaugurate the Newcomen engine in 1979.

There is ample room for expansion at this promising newest open air museum of industrial archaeology.

Restoring Cast Iron Work: the Council of Ironfoundry Associations can supply free of charge, a list of iron foundries interested in undertaking work which involves replacement of decorative cast iron on buildings. Some foundries have a selection of old patterns (the models used to make the mould into which molten iron is poured), though the chances of finding an exact match for existing iron work are remote. New patterns can be made, but this is a highly skilled, and therefore expensive, job. The usual practice in restoration work of this sort is to remove a piece of undamaged (or even damaged) cast iron and use it as a pattern for a replica, fractionally smaller than the original.

In addition to the list of foundries, the Council can provide booklets on the basic principles of the casting process and on the many sorts of cast iron available and their properties. Contact Miss Wendy Slemen, Council of Ironfoundry Associations, 14 Pall Mall, London SW1 Y 5LZ, telephone 01-930 7171.

Holiday Flat in the Peak District: Industrial Archaeologists wanting a self-contained holiday flat in the Peak District are invited to contact a fellow member, Mr. Lindsey Porter, Knowle Cottage, Market Place, Hartington, Buxton, Derbyshire SK17 0AL, telephone Hartington (0298 84) 435, for further details.

The flat is in Hartington village, adjacent to the office of Moorland Publishing Company.

Bridges and Bridgebuilders of Cleveland: The Annual half-day meeting of the Cleveland Industrial Archaeology Society will cover Bridges and Bridgebuilders of Cleveland, and will be held at 2.00 pm on Sunday 19 March 1978, at the Leeds University Centre, Harrow Road, Middlesbrough, Cleveland. An Engineer from the County Authority will give an illustrated lecture on the 1911 Transporter Bridge which spans the river Tees. The Cleveland Bridge and Engineering Company of Darlington will make a contribution covering some of the examples that this company has built all around the word including the 1905 Victoria Falls Bridge, 1909 Nile Bridge, 1936 Lower Zambezi, 1936 Verugas Bridge, Peru, 1942 Nowra Bridge, India, 1959 Auckland Harbour Bridge, New Zealand, 1964 Forth Road, and 1966 Severn Bridge. It is hoped
that a rare film of the construction of the Sydney Harbour Bridge in the early 1930’s, fabricated by Dorman Long in Middlesbrough will be shown. Other speakers will describe bridges along the River Tees, such as the 1934 Tees (Newport) Bridge which is capable of lifting the 5400 ton central span by means of two 326 HP electric motors. Information leaflets about this meeting will be available from

Tomlin, 13 Albert Road, Eston, Cleveland TS6 9GN.

Industrial Archaeology of Mid-Wales compiled by an active Member of the AIA, Mr J B Croucott, deals with the Industrial Archaeology of the former County of Radnorshire. These notes cover metal mining, water mills, railways, roads, quarries, aqueducts, the power industry and manufacturing and service industries. There are also brief notes on farming and other features. It is illustrated with maps of the area and detailed notes on Rhayader. Members of the AIA requiring copies of these notes are asked to write to Mr Croucott at 37 Trefelen Way, Llandrindod Wells, Powys, LD1 5YA, enclosing 25p for copying and postage.

The Pattern of Past Industry in the Brecon Beacons National Park has recently been published by the National Park; A brief gazetteer of Industrial Archaeological Sites in the National Park, this booklet, priced 20p is obtainable from the National Park Office at Garnorgan Street, Brecon, Powys LD3 7DP. The twenty pages are split into extractive industries, ironmaking, other industries, communications and miscellaneous. Each section gives a short history of the industry followed by brief but excellent references to sites including NG References. This booklet is essential reading for any visitor to Powys and would form a worthwhile part of any industrial archaeologist’s bookshelf.

‘Conservation and craft skills’ – Crafts Advisory Committee: This pamphlet forms the greater part of a report prepared in 1975 by the Crafts Advisory Committee for the use of the Department of Education and Science. It studies the current activities in conservation with particular reference to craft skills. It also looks at the needs for conservation skills and the demand for them. It summarises current training and makes suggestions as to how it can best be expanded. The brochure includes some useful appendices listing workshops, organisations, colleges, trusts, courses and local authorities visited. Available gratis from – The Crafts Advisory Committee, 12 Waterloo Place, London SW1 Y 4AU.

Industrial Archaeology

The re-appearance of Industrial Archaeology containing two numbers – 11/4 and 12/1 – may confuse those of our members who do not realise that the Association has no connection with this publication. The AIA journal is Industrial Archaeology Review, and the Council are anxious that no misunderstanding should arise amongst our members about the separate existence of these two periodicals.

AIA Members should submit articles for publication to the Editor of Industrial Archaeology Review, Professor John Butt, Department of History, University of Strathclyde, McCance Building, 16 Richmond Street, Glasgow G1 1XQ.

Education Group: In the Bulletin for July 1976
(3.1) Dr Michael Lewis drew attention to the AIA Adult Education Committee, which first met in May 1975. Members may be interested to know of subsequent developments.

Perhaps the most important was the acceptance of the fact that whilst most industrial archaeology teaching is to adults, there was a great scope for the expansion of industrial archaeology in schools. With this in mind it decided in September 1976 that the Committee should extend its interest to education wherever it was being provided.

The most recent meeting, held at the Manchester Conference this September, reached a number of decisions. First it was decided to ask the Convener to investigate the possibility of a conference at national level on the teaching of IA in schools, in association with the Schools Council. At the same time, individual members should be encouraged to hold meetings in their own areas — this was being done in Southampton and Nottingham. He was also asked to investigate the best way of letting teachers who were interested know about this.

The address to write to is:
Dr Edwin Course, Department of Adult Education, The University, Southampton, S09 5NH.
